LAIA 75

There are different types of size and different types of resistance, a wrong choice of size or a wheel that will carry more weight than it can support will become a big problem, since they will not slide easily or could directly break. It is very important that before buying the wheel you have the correct information on what weight it will have to support and what the appropriate size will be, take into account both the diameter and the height of the wheel since if it is a piece of furniture that fits right in one place and it's only a few inches too big, a wheel that's bigger than that isn't going to be useful. In these tables, both for the low ones and for the high ones, we have used LAIA 75, the ideal diameter to support their weight and allow constant and effortless movement, especially for work spaces where they will be used daily.

Spaces with furniture on wheels is the new way to constantly build the office you need.

Are you one of those who escape from standard products? If you prefer design objects and strive to achieve harmony, both in furniture and accessories, then you will like this scene. We believe that our Laia 60 could not be better for these robust chairs, a style of wheel that does not go unnoticed. In this decoration we bet on its black body to match the legs of the chairs and without brake, to enjoy its movement at all times. Keep in mind that the wheels with rubber tread (such as the Laia family) are the ones that will take care of your floors and will make you slide easily as many times as you want and without damaging them.

Laia, a wheel that you will love to have in your day to day.

Nowadays, furniture with wheels is widely chosen in educational centers with the aim of achieving different types of class composition in the same room according to the needs of each teacher. In addition, having all the furniture on wheels, both the chairs and the tables, is very practical when it comes to cleaning, since an educational center is a place that is cleaned several times a day.

In this way, the cleaning sector will have it very easy and will save time and practicality by not having to move things dragging their own weight.

Eva is one of our most chosen wheels for folding tables, this is due to its strength and quality.

Flexibility is always good and our wheels make it possible.
